

AGI chooses a 6 server Dev Zero G nVerge installation.

LONDON, England — 6 October, 2005 — AGI Solutions chooses a 6 server Dev Zero G nVerge installation, to be supplied by FileTransfer.co.uk, as AGI's global file transfer management tool to handle the demanding task of distributing Publicity, Marketing and Packaging artwork for some of the biggest Media Companies between the many AGI offices across the world.

nVerge has been effortlessly and successfully transferring jobs ranging in size between 50 megabytes to well over 6 gigabytes between the many AGI offices in Europe, Australia, Asia and North America.

nVerge has been vital in delivering workflow control, reliability, certainty and network optimisation to AGI - as well as being one of the most simple solutions the company ever had to implement.

nVerge was chosen over several other mature solutions in the industry, proving it is the new revolutionary data transfer management solution.

Some of the main features of nVerge are automatic recovery and resuming, encryption, transmission scheduling, unlimited satellite clients, delivery and status email notification, hot folders and browser-based sending, automatic transparent compression and many more.

For a full list of nVerge features please go to
