

## Dev Zero G releases PrintSure version 5.

-PrintSure 5 features XMP metadata collection and PDF error correction-

LONDON, England — 1 July, 2005 — Dev Zero G Ltd ([www.devzerog.com](http://www.devzerog.com)) a global leader in productivity solutions for the print and media industries, today releases PrintSure 5, a major new version of its unique digital artwork receipt and verification portal.

PrintSure speeds up the receipt of digital artwork, by automating and integrating the entire process into existing workflow systems. QA, CRM processes, tracking, accounting, delivery and receipt, notification and job ticketing are just some of the tasks that can be automated to produce dramatic increases in productivity and real savings – straight to the bottom line.

PrintSure provides end-users with a tool that locally preflights PDFs (changes to preflighting profiles are updated automatically, in real time), collects job ticket information, locates and displays problems within a file (and, optionally, fixes them) and delivers verified files to a hot folder on the host server, where existing workflow systems can continue to automatically process them.

Household names, like Tesco plc and media industry heavyweights, such as Courier Corporation, Inc., Polestar Group and Wyndeham Press Group plc, rely on PrintSure to streamline their digital artwork receipt and verification processes. Barry Fitzpatrick, Wyndeham's group technical director, describes PrintSure as a "product that meets the critical demands of our industry."

PrintSure will deliver a 97% ROI (paying for itself in 6 months) to any company which receives and processes just 5 PDFs a day. At 50 PDFs per day, PrintSure delivers a stunning 1,411% ROI, paying for itself in just over 3 weeks! PrintSure client DLW ([www.dlw.fr](http://www.dlw.fr)) saves over 100 man hours per month by using PrintSure.

PrintSure 5 – 35 new features.

Version 5 is loaded with new features – the most important are:

- ❑ **Error Display** – visual highlighting of errors within a PDF
- ❑ **Error Correction** – automatic fixing of over 50 errors in a PDF
- ❑ **Job Ticket Collection** – job tickets embedded as XMP meta-data within a PDF
- ❑ **Dynamic Delivery** – verified PDF destinations based on individual preflighting results
- ❑ **New Profile Editor** – more powerful and easier to use, with over 120 verification criteria
- ❑ **Dynamic Page Validation** – multiple page sizes can be validated with a single profile
- ❑ **User Role Definition** – providing much more flexible access control
- ❑ **Email Templates Editor** – allowing customisation of notification emails

For a demonstration of PrintSure 5, or for more information on how to streamline asset receipt and verification, please call Dev Zero G on +44 20 7237 8102.

#### About Dev Zero G Ltd:

Founded in 1999, Dev Zero G is a developer of innovative, turn-key solutions that deliver measurable ROI to the print, publishing and premedia industries, by providing significant and tangible increases in productivity.

The company has grown rapidly over the past five years, during which time it has launched three major families of products: Uploader, PrintSure and nVerge – all built on Dev Zero G's core file compression, verification and secure transmission technologies. Uploader and PrintSure have already gained a worldwide reputation for effectiveness, reliability and ease-of-use.

Through its established network of several hundred resellers, Dev Zero G provides solutions and support to an ever-growing global client base, which includes some of the world's leading advertising, media and print companies.
